

# **AGILE MANIFESTO**

# 4 Agile Core Values

**Individuals and interactions  
over processes and tools**

Agile places more importance to people than tools.

**Working software over  
comprehensive documentation**

Agile focuses on streamline and not on documentation.

**Customer collaboration  
over contract negotiation**

Agile people collaborate with customers and project manager, discuss and values their feedback.

**Responding to change  
over following a plan**

Agile works in sprint, which helps in improving projects and add values.

# Principles behind the Agile Manifesto

- Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.
- Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.
- Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
- Business people and developers must work together daily throughout the project.
- Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.
- The most efficient and effective method of conveying information to and within a development team is face-to-face conversation.
- Working software is the primary measure of progress.
- Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.
- Continuous attention to technical excellence and good design enhances agility.
- Simplicity--the art of maximizing the amount of work not done--is essential.
- The best architectures, requirements, and designs emerge from self-organizing teams.
- At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.
