

CLOUD Computing

By: Ritesh Bagre

What is Cloud Computing?

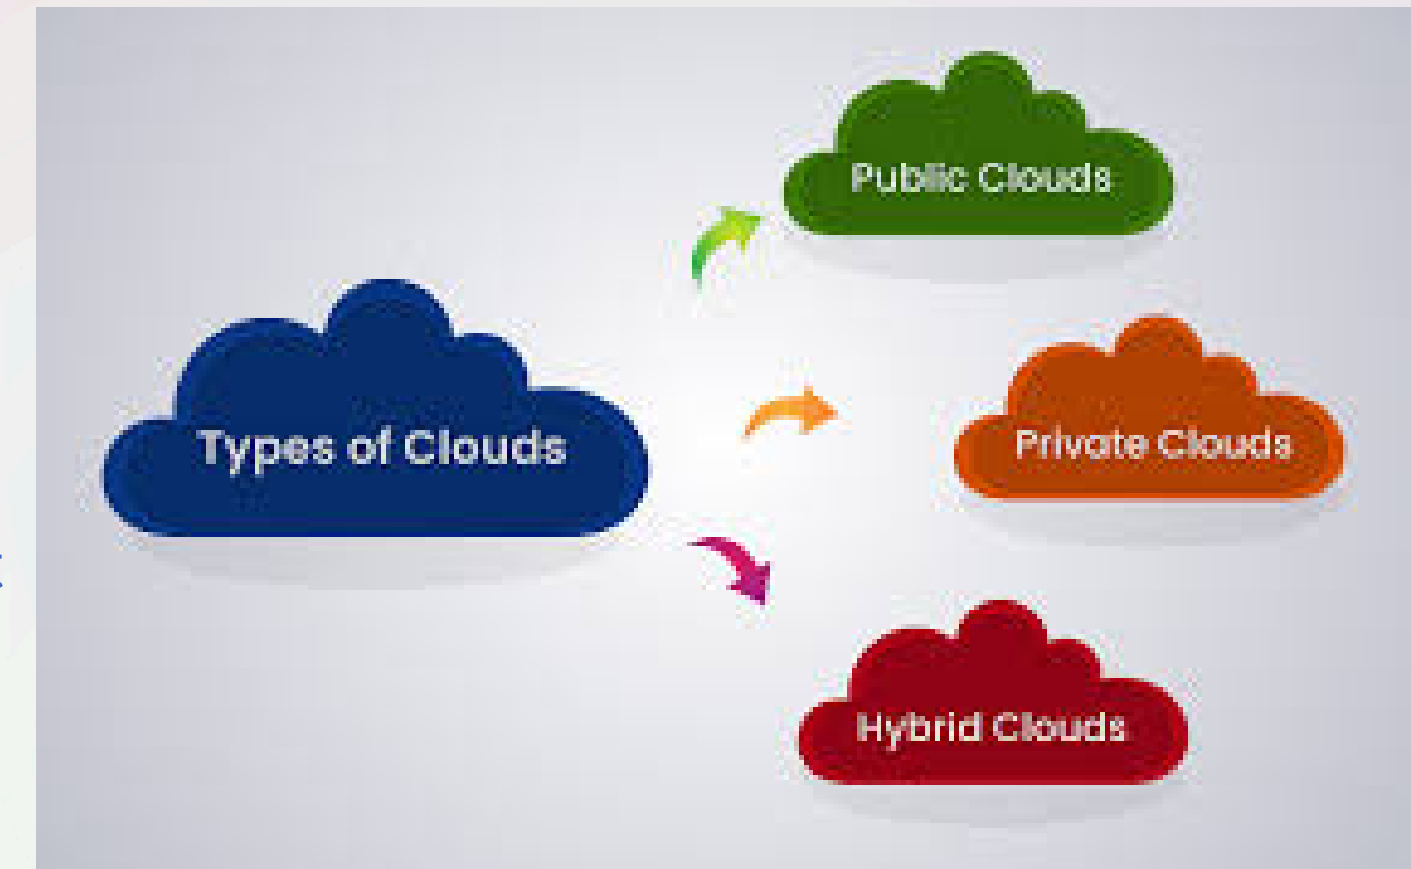

Cloud computing is the on-demand access to computing resources over the internet, or "the cloud". It allows users to rent IT services instead of buying and maintaining physical resources

Types of Cloud

There are Three Type of Clouds are:

- Public Cloud - Here all services are free and available for customers via internet and their data's security is managed by service provider.
- Private Cloud - Here also all services are available same as public but here data and security is managed by organization for particular customer and high control is there and costly too.
- Hybrid Cloud - It's a combination of public and private cloud ,also provide all services with cost effectiveness.

Types of Cloud Providers:

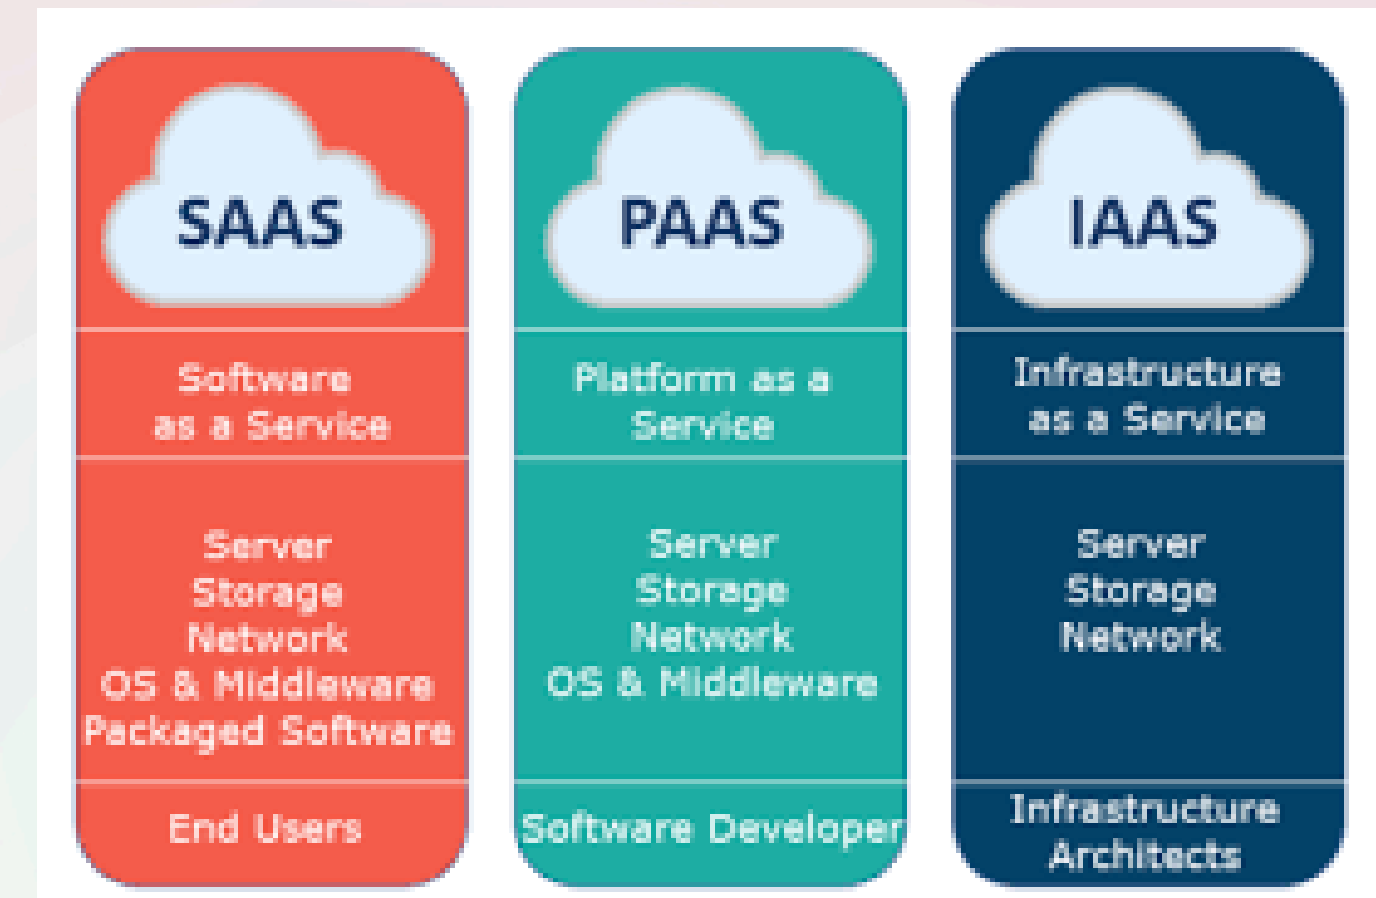

There are Mainly Three Type of Clouds Provider are:

- Amazon Web Services (AWS)
- Microsoft Azure
- Google Cloud Provider(GPC)

What is Service Model?

A 'Cloud Service Model' refers to the different types of services offered in the cloud computing environment, such as SaaS, PaaS, and IaaS, each with its own set of benefits and drawbacks.

Different Service Models:

There are Mainly Three Type of Clouds Provider are:

- Software as a Service (SaaS)
- Platform as a Service (PaaS)
- Infrastructure as a Service (IaaS)
